Captain Webb Primary School Calculation Policy

This policy ensures that the teaching of calculation is consistent throughout the school.

The models and images outlined are progressive so that children can build on their prior knowledge.

This will ensure that children will acquire effective written and mental methods to allow them to access the wider maths curriculum.

Calculation Policy

This policy provides an overview of the strategies used in our school to teach Mathematics, specifically the four operations, as defined within the National Curriculum in England: Mathematics Programme of Study.

The progression of the four operations (+, -, x and ÷) are shown across each of the primary year groups 1 - 6. This is a guide since children progress at different rates. Teachers should model strategies appropriate to the ability of the children they teach, regardless of their year group, whilst striving to achieve age related expectations at the end of the academic year.

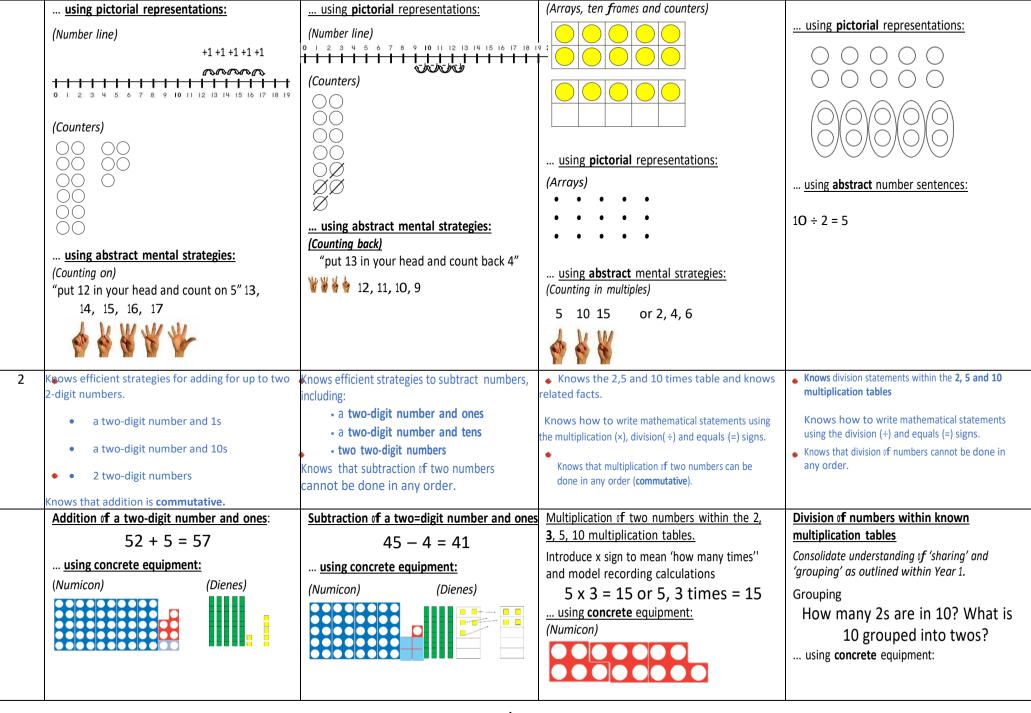

At Captain Webb Primary School, we believe that children should be introduced to the processes of calculation through the **concrete**, **pictorial** and **abstract** approach. Our children are introduced to calculation through practical activities, using **concrete** resources. As children develop their understanding of key concepts and mathematical models, they develop ways of recording to support their thinking. In the first instance, this recording takes the form of **pictorial** representations. Over time, children learn how to use models and images to support their mental and informal written methods of calculation.

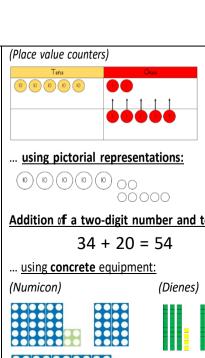

As children become more proficient in their use of mental methods, their informal written methods also become more efficient. Some recording takes the form of jottings, which are used to support children's thinking. More **abstract**, formal written methods are taught only when the child is able to use a wide range of mental calculation strategies and these are always underpinned by **concrete** and **pictorial** experiences.

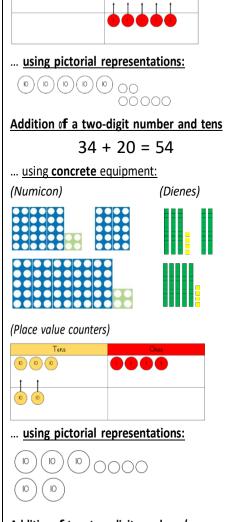

Our ultimate aim is for children to be able to select an efficient method to solve problems. Therefore, children will be encouraged to look at a calculation or problem and to determine the most appropriate method to choose – pictures, mental calculation with or without jottings or a formal, written method.

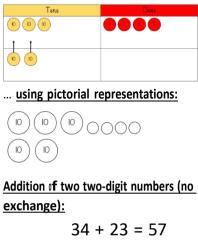

The end of year expectations in the National Curriculum shows the progression in children's use of calculation within the following strands 'Addition and Subtraction' and 'Multiplication and Division'. These end of year expectations will be achieved through the use of the following written methods of calculation.

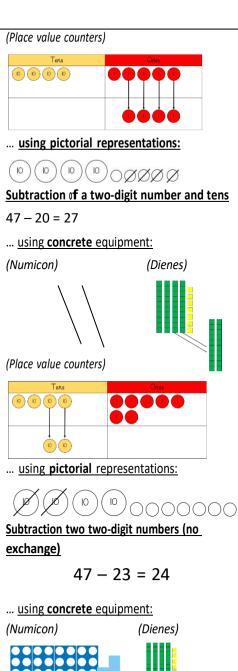

Year	Addition +	Subtraction -	Multiplication x	Division ÷
1	 Knows how to add and subtract one and two digit numbers to 20 including0. Knows how to read, write and interpret mathematical statements including the addition (+) and equal to (=) sign. 	 Knows how to subtract one-digit and two-digit numbers to 20 including zero. Knows how to read, write and interpret mathematical statements involving subtraction (-) and equal (=) signs. 	 Knows that doubles are two groups of the same number and begin to multiplication. Knows that equal groups can be represented in arrays (Begin to look at other multiples, e.g. x 5). 	 Begin to understand division through grouping and sharing small quantities.
	Addition of single digits:	Subtraction of single digits	Doubling – linking to x 2	Sharing equally
	5 + 3 = 8	7 - 4 = 3 using concrete equipment:	Double 4 is 8, 4 + 4 = 8 or	Share 10 into 2 equal groups
	using concrete equipment:		4 x 2 = 8	using concrete equipment:
	(Numicon)	(Numicon)	using concrete equipment: (Numicon)	Count how many are in each set = 5
	Addition of two digit numbers to 20 and a one digit number: 12 + 5 = 17	Subtraction of a one-digit number from a two-digit number to 20.		using pictorial representations:
	using concrete equipment: (Numicon)	13 – 4 = 9 using concrete equipment: (Numicon)	using pictorial representations:	
	(Dienes)	(Dispar)	Use an array or equal groups to solve multiplication problems for multiples other than 2	<u>using abstract number sentences:</u> $10 \div 2 = 5$
	(Dienes and ten frames)	(Dienes)	5, 3 times or 5 x 3 = 15 using concrete equipment (Numicon)	Grouping How many 2s are in 10? What is 10 grouped into twos?
		(Dienes and ten frames)	I then use my 10s checker	using concrete equipment: Count how many groups = 5 (Numicon)
	(Bead string)			Model putting the 2s on top of the ten Numicon tile. How many 2s have I used? 5

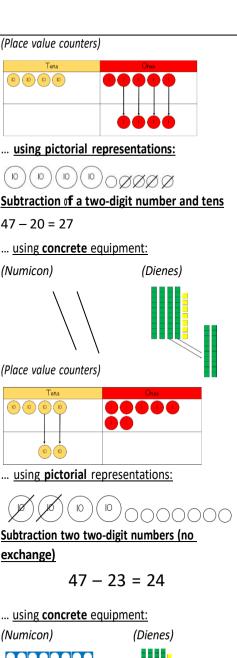

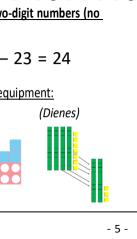

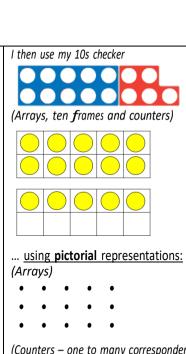

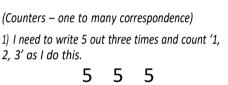

2) Now, I need to draw circles around my numbers as I count in multiple of 5. E.a. '5. 10.

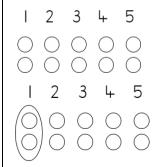

... using abstract mental strategies:

(Counting in multiples) 5 10 15 or 2, 4, 6 or 10, 20, 30

Count how many aroups = 5

using **pictorial** representations:

(Counters – one to many correspondence)

1) I need to write 2 as many times as it takes me to count in multiples of 2 to aet to 10 e.a. 2.4. 6. 8. 10.

2 2 2

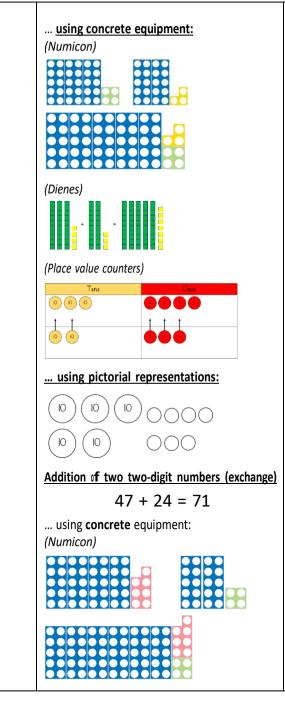

2) Now, I need to draw circles around my numbers to count how many groups I have e.g. 1, 2, 3, 4, 5.

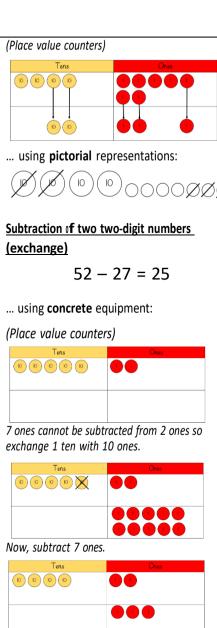

... using **abstract** number sentences:

 $10 \div 2 = 5$ $12 \div 3 = 4$

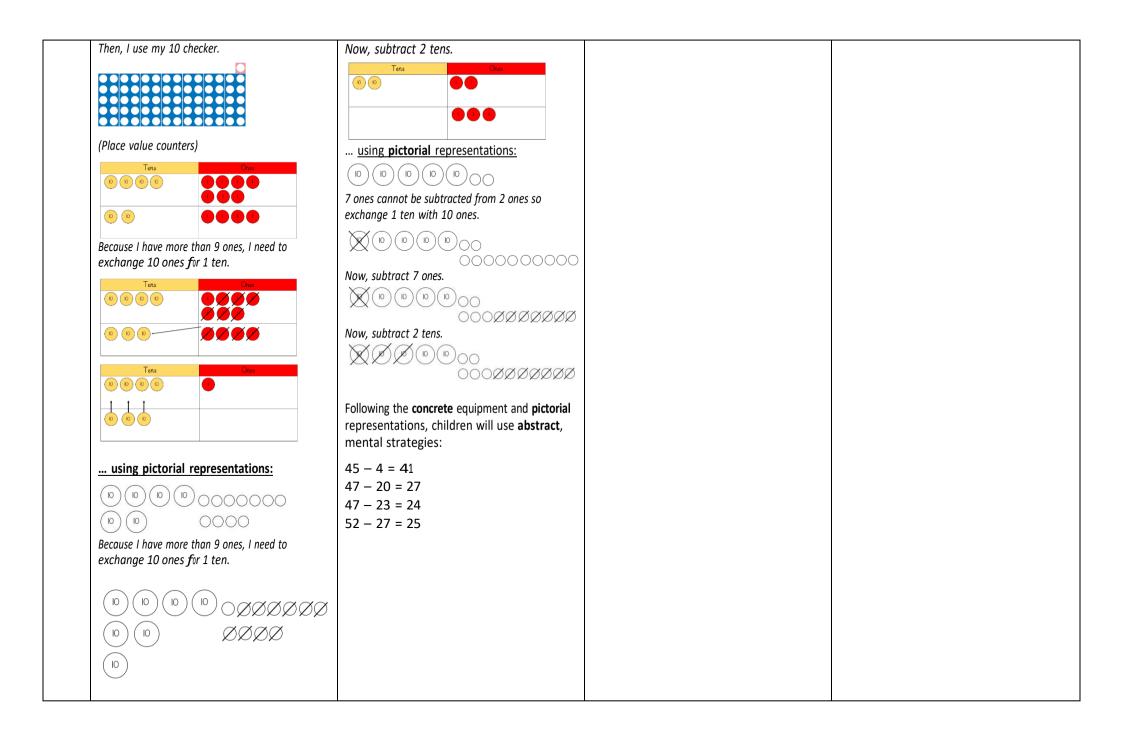

Pupils write number sentences to represent their workings out using the division (÷) and equals (=) signs.

Calculate mathematical statements within the **2, 5 and 10 multiplication tables** and write them using the multiplication (×) and equals (=) signs.

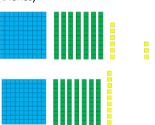

4 x 5 = 20 7 x 10 = 70 9 x 2 = 18

Following the concrete equipment and pictorial representations, children will use abstract mental strategies: 52 + 5 = 57 34 + 20 = 54 34 + 23 = 57 47 + 24 = 71 Addition of three single digit numbers: 4 + 7 + 6 = 17 using concrete equipment: Identify number bonds if possible, e.g. 4 and 6 make 10 / 4 + 6 = 10. Then, add on 7 (Numicon) using abstract, mental strategies: 4 + 7 + 6 = 17 Identify the two numbers that make ten and then add on the remaining number mentally. Knows efficient mental strategies including partitioning and adjusting to add numbers mentally, including: a three-digit number and ones a three-digit number and tens	Knows efficient mental strategies including partitioning and adjusting to add numbers mentally, including: • a three-digit number and ones • a three-digit number and tens	Knows the multiplication facts for the 2, 3, 4 and 8 multiplication tables. Knows how to multiply two-digit numbers times one-digit numbers, using multoiplication facts they know,	 Knows how to derive corresponding divisions for the 2,3,4,5,8,10 times table Knows how to divide using known
• a three-digit number and hundreds Knows how to add numbers with up to three digits, using formal written methods of columnar addition	a three-digit number and hundreds Knows how to subtract a two-digit or 3- digit number from a two-digit or 3 digit number using a formal written method	using efficient written methods- 'partitioning method'	multiplication tables, including for two-digit numbers divided by one-digit numbers, using mental methods, progressing to efficient written
Addition of a three-digit number and ones: 176 + 3 = 179	Subtraction of a three-digit number and ones: 136 – 4 = 132	Recall and use multiplication facts for the 3, 4 and 8 multiplication tables. 8 x 4 = 32	methods Recall and use division facts for the 3, 4 and 8 multiplication tables. 56 ÷ 8 = 7
